

ABSTRACT OF THE DISCLOSURE

METHOD AND APPARATUS FOR MANAGING AGGREGATE BANDWIDTH AT A
SERVER

5 A method, apparatus, and computer implemented instructions
for managing traffic in a network data processing system.
Traffic for a plurality of network paths is monitored. In
response a packet for a particular network path within the
plurality of network paths causing traffic for the
particular network path to exceed a level of traffic
10 allowed, an amount of available bandwidth is reduced based
on a fair share for the particular network path.
